// FIELD CHEAT CARD — No. 001

THE EXPOSURE TRIANGLE

Every photo you will ever take is a trade between three settings. Learn the trade, and the camera starts obeying.

APERTURE THE IRIS

CONTROLS **LIGHT + BACKGROUND BLUR**

How wide the lens opens. Wider drinks more light and melts the background. Narrower lets in less — and sharpens everything.

f/1.8 — MORE LIGHT · MORE BLUR ●——● **f/11** — LESS LIGHT · ALL SHARP

SHUTTER SPEED THE CLOCK

CONTROLS **LIGHT + MOTION**

How long the sensor drinks light. Longer brightens the frame — and smears anything that moves. Faster freezes the moment cold.

1/30s — MORE LIGHT · MOTION BLUR ●——● **1/1000s** — LESS LIGHT · FROZEN

ISO THE AMPLIFIER

CONTROLS **SENSITIVITY + NOISE**

How hard the sensor listens. Low is clean but needs real light. High shoots in near-dark — and pays for it in grain.

ISO 100 — CLEAN · NEEDS LIGHT ●——● **ISO 3200** — SHOOTS DARK · GRAIN

THE TRADE

Change one setting and you owe another. Every stop of light you gain is paid for — in blur, in shake, or in noise. Decide what the photo needs, then pay on purpose.
